Using the Free, Open-Source Intention Repeater to Power a Scalar Tech Device
by Thomas Sweet aka Anthro Teacher (10/15/2020)

This is a Nano Lemurian Power Wand, available from Orgone Crystals here:
https://www.orgonecrystals.com/product/a-nano-lemurian-power-wand/

It has two wires going into it, wrapped around a central Lemurian crystal, in a Mobius Coil, set in a powerful Orgonite matrix/base. Normally, it comes with a device that pulses it at a certain frequency, but I have found that it can be connected to the headphone jack of a computer and charged up in a powerful manner.

You can use an online frequency generator to send specific frequencies to it, such as this one:
https://www.szynalski.com/tone-generator/

For greater possibilities, I recommend using my free, open-source Intention Repeater WAV File Writer, available here:
https://www.intentionrepeater.com/

I also recommend the freeware VoiceMeeter to allow you to output both to speaker and the headphone jack at the same time, in case you want to hear the WAV playing:
https://vb-audio.com/Voicemeeter/

See the video on how I use Scalar Tech with the resulting WAV file:
https://youtu.be/LMYdvASvS-g

The resulting WAV file will sound like a jackhammer, but volume can be lowered if listening. For the Scalar Tech device I recommend running at full volume. If it is a little audible, it can be even more powerful. VoiceMeeter lets you control the volume of the headphone jack and speakers independently.

The Scalar Tech can be used to cool the air to any desired quality and temperature. As with anything, YMMV. It is powered by a Servitor (programmed Intelligent Energy), which in this case happens to be a black hole (HR 6819), that was 20 years, 2000+ hours in its co-creation with 100's of other beings. Because everything is HERE and NOW, and space/time is an illusion, it is possible for a black hole to power software.

The software works by repeating your intention multiple times per second. This Scalar Tech with a WAV is by far the most powerful method I have created using the Repeater. I don't even need AC and it keeps it cool for just the cost of running a cheap $350 laptop through the headphone jack, as well as the Scalar Tech. The Scalar Tech could be as cheap as a mobius coil wrapped around a crystal, known as a Succor Punch, which you can research. You could even power it with a Raspberry PI for $100.

Please visit our forums for more information and to see how others are using the Intention Repeater:
https://forums.intentionrepeater.com/

Here is the direct link to the Python3 of the Repeater WAV Writer. It requires 3.5.3 of Python minimum:
https://www.intentionrepeater.com/Python/intention_repeater_wav.py

Here is the direct link to the standard Intention Repeater:
